Grafana catalog info
grafana.com/grafana/plugins/vaduga-mapgl-panel

- geo coordinates from: NetBox API, PostgreSQL, Zabbix inventory, etc.
- links metadata and additional properties

Zabbix / Prom / Influx, any other source for status, bandwidth and other metrics

Geo view node graph with basemap options and style configuration in panel UI

Node graph with layered auto layout. Orthographic view

Features:

- one-click installation from the Grafana Catalog
- minimal requirements for nodes and edges: a unified data frame with no hardcoded field names
- two render modes: multi-segment routes and direct arcs view
- network interface load (TX/RX) visualization with bi-metric arcs
- rich nodes and edges styling options with overrides for groups
- dynamic drill-down to external panels
- Grafana alerting states with history projected onto nodes
- full native Grafana field configuration support: thresholds, data links, units, mappings

Demo panels
play.mapgl.org

Buy
mapgl.org/buy

Extra features:

- cluster icons with node group statistics
- node groups ad-hoc filter in the legend
- adjacent and nested edges info in tooltips
- namespace subgraphs with visual editor
- parallel routes handling: offset, aggregate, nest, reduce (min/max)
- live stream updates from trigger events via HTTP endpoint for immediate rendering

Distribution & security

Plugin bundle includes:
- open-source Mapgl panel plugin code as validated by the Grafana plugin catalog submission
- sandboxed WebAssembly components with no network access, limited to producing the intended output for paid features.
