**Features:**

- [One-click](#) installation via the Grafana Catalog
- **Node Graph** with subgraphs and layered autolayout
- **Geomap** view with basemap and style configuration in the UI
- Minimal requirements: a unified data frame for nodes and edges, with no fixed field names
- Dual render modes: multi-segment routing and direct arc view
- Bi-metric arc rendering for network interface load (TX/RX)
- Advanced styling for nodes and edges, with group-level overrides
- Ad hoc filter for node groups in the legend
- Dynamic drill-down links to external panels
- Grafana alerting states with history projected onto nodes
- Full support for Grafana field configuration: thresholds, data links, units, mappings

**Data Requirements**

- Link metadata, Geo-coordinates (if applies), additional node and edge properties from NetBox API, PostgreSQL, Zabbix inventory, etc.

**Metrics & Integrations**

- Compatible with any Grafana datasource: Zabbix, Prometheus, InfluxDB, etc.

**Pro Features:**

- Cluster icons with node group statistics
- Adjacent and nested edges details in tooltip
- Visual editor for namespace-based subgraphs
- Advanced parallel route handling: offset, aggregation, nesting, and min/max reduction
- Live-stream updates from event-triggered HTTP messages

**Support & Updates:**

- Assistance with dashboard setup and data transformation
- On-demand feature development

**Distribution & Security**

Plugin bundle includes:

- Open-source Mapgl panel plugin code, as validated by the Grafana plugin catalog submission
- Sandboxed WebAssembly components with no network access, restricted to producing intended outputs for paid features.
